cnrs

```
usage: cli.py [-h] (--ioc IOC | --csv CSV | --hunt HUNT | --hunt-csv HUNT_CSV | --pipe-csv) [--type TYPE] [--new-source NEW_SOURCE] [--source SOURCE] [--limit LIMIT] [--offset OFFSET]

CLI tool to inject IOCs in HarfangLab and hunt potential threats

options:
  -h, --help            show this help message and exit
  --ioc IOC             value of the unique IOC e.g : (8.8.8.8)
  --csv CSV             path to the csv file to import
  --hunt HUNT           search this ioc in the telemetry
  --hunt-csv HUNT_CSV   research multiple IOCs in the telemetry throug an IOC file
  --pipe-csv            read te csv data directly from the terminal pipe
  --type TYPE           type of indicator e.g = ip_dst, domain, url, hash...
  --new-source NEW_SOURCE
                        name of the new ioc source to create
  --source SOURCE       name of the new existing IOC source to use
  --limit LIMIT         number of results to return (default: 100)
  --offset OFFSET       starting index for results (default: 0)
```
